

# SAFETY AND HEALTH

## Let the Master Builders Safety be your Compass

With the State Government significantly increasing the penalties under Western Australian Safety Laws, and the upcoming workplace health and safety reforms, the Master Builders Western Australia Safety Department can assist you to navigate this new environment.

We have revised and updated our suite of workplace safety and health services to reflect the assistance needed within the construction industry for all levels of building contractors and all tiers of the industry. We aim to provide a tailored service to suit your needs at a great price. Member Builders receive special discounts on our services.

## How We Can Help You?

Master Builders' team of safety experts have significant experience and an in-depth knowledge base to support our industry and provide what contractors actually need and want, allowing a customised solution to meet your specific safety requirements.

- + Modern approach
- + User friendly services
- + Cost effective with member pricing

# Safety Services

## The Master Builders difference

### 01. SAFETY MANAGEMENT SYSTEM HEALTH CHECK

We will provide you with a gap analysis on your existing safety management system and guidance about updating and upgrading these systems to meet current legislative safety requirements.

### 02. IN-HOUSE SAFETY CONSULTANCY FOR SMALL BUILDERS OR SUB-CONTRACTORS

Embed a Master Builders Safety Consultant in your business on a regular or ad hoc basis to provide in-house safety advice, guidance and support. This can include site safety inspections.

### 03. SITE SUPERVISOR MENTORING

Arrange for your Site Supervisor to receive regular mentoring by one of our Safety Consultants. Our team uses a knowledge transfer-based approach to advise supervisors of what needs to be done and, most importantly, help them understand why it needs to be done. We will support and guide them to increase their safety knowledge within construction.

### 04. SITE INSPECTIONS

Use our Master Builders Safety Team to conduct regular or ad hoc safety inspections at your site. During the inspection, the consultant will discuss what hazards have been observed with workers, provide advice and recommendations on how to control the hazard, and advise of any changes in legislation that may be applicable. After each inspection, we provide you with a report detailing what was observed on site and outlining any recommendations made and the relevant legislation. Use this valuable information to develop strategies to tackle more common safety problems.

### 05. SAFETY MANAGEMENT PLANS

Safety Management Plans (SMPs) have been a requirement in the WA building industry since 2008. We provide a tailored SMP to meet your needs to ensure legislative compliance.

### 06. SAFETY MANAGEMENT SYSTEMS

We provide everything you need to ensure your Safety Management Systems are compliant and easy to use, including all procedures, forms, policies and inductions for your personalised system.

### 07. GROUP SAFETY INDUCTIONS

Let the Master Builders Safety Team set up your site and help develop sound safety practices based on your induction processes. We can help you develop an induction to suit your requirements. We can come to your location and conduct the induction for 2 to 200 workers.

### 08. AS45001 / 4801 GAP ANALYSIS AND ACCREDITATION

Have Master Builders Specialists complete a gap analysis and field verification of your safety management plans and safety documentation. We will provide you with a comprehensive report after all data has been reviewed and on-site documentation assessed, which will include a recommended action plan addressing any identified gaps from the audit.

### 09. ASBESTOS MANAGEMENT PLANS, ANALYSIS, SURVEYS AND ADVICE

Master Builders Specialist Consultants provide professional advice, assessment, monitoring, management, inspection and remediation of Asbestos and Hazardous Materials. We utilise NATA-accredited laboratories for all aspects of Asbestos and Hazardous Materials testing and sampling.

### 10. SPECIALISTS SERVICES WHEN WORKING NEAR OVERHEAD POWER LINES

We can assist in ensuring you and your workers are protected from the hazards associated with powerlines. We provide expert advice about working in vicinity of overhead power lines and underground cable, provide competent safety observers for work in vicinity of power lines/cables, assist in the development and implementation of the applicable safe work method statement and procedures, and present site-specific safety briefings and toolbox talks.

### 11. ONSITE DRUG AND ALCOHOL SCREENING

Specialist Consultants can work with your organisation to conduct onsite drug and alcohol testing, providing fast and accurate results.
